

Cervical Biopsy Blade

The specialty Swann Morton Cervical Biopsy blade is primarily used with the Long Stainless Steel Major Handle (07L) to take a “cone” biopsy from the tissue in a woman’s cervix. The tissue sample is analyzed to assess the presence of malignant and non malignant carcinoma cells.

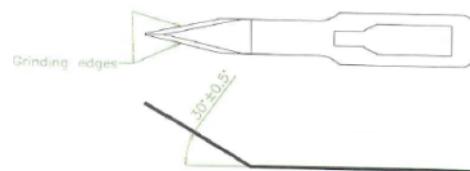

This blade is a suitable cross for part number 379100 that has been discontinued by Beaver-Visitec. However the blade will not work with the same handle. **Only the handles listed below will fit this blade.** The cutting edge of this blade is raised to a 30 degree angle (see drawing).

Cross Reference Information

	Beaver-Visitec	Swann Morton
Cervical Biopsy Blade	379100	01C
Standard Handle	375000	07S
Long Handle	372000	07L
